

In The Claims

Please amend claims 1 and 26 as follows:

AC 1
1. (Twice Amended) A plastic molded container comprising:

B
a blow-molded bowl comprising an upper rim, a bottom and a sidewall extending between the upper rim and the bottom, the sidewall in cross sectional profile being a smooth continuous curve between the upper rim and the bottom, the sidewall extending radially outwardly before extending radially inwardly as the continuous sidewall extends downward between the upper rim and the bottom to provide a bulging continuous sidewall.

2
26. (Once Amended) A plastic molded container comprising:

B
a bowl comprising an upper rim, a bottom and a sidewall extending between the upper rim and the bottom, the sidewall in cross sectional profile being a smooth continuous curve between the upper rim and the bottom, the sidewall extending radially outwardly before extending radially inwardly as the sidewall extends downward between the upper rim and the bottom to provide a bulging sidewall, the sidewall further having a diameter larger than the height of the bowl, the height being the distance between the bottom and the upper rim.

Please add new claims 31, 32 and 33.

31. (New) The plastic molded container of claim 7, wherein the diameter at the largest circumference is positioned below the midpoint height of the plastic molded container.

32. (New) A plastic molded container comprising:

B
B a bowl comprising an upper rim, an opening, a bottom and a sidewall extending between the upper rim and the bottom, the sidewall in cross sectional profile being a smooth continuous curve between the upper rim and the bottom, the sidewall extending radially outwardly before extending radially inwardly as the sidewall extends downward between the upper rim and the bottom to provide a bulging sidewall, the sidewall further having a diameter larger than the height of the bowl, the height being the distance between the bottom and the upper rim and the opening is substantially the same size as the diameter.

33. (New) The plastic molded container of claim 1, wherein the sidewall is symmetrical in profile.
